### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the references of record neither reveal nor render obvious the recited combination including the concept of using a noise filter to attenuate DC currents while passing DC currents, the noise filter comprising first and second conductors coupled to first and second anodes and dielectric layers in the claimed manner, having a sufficiently thick conductor to reduce heating caused by the DC current.

U.S. Patent 6,853,268 to Harada provides a noise filter having four magnetic layers. U.S. Patent 6,836,195 to Arai et al presents a transmission line type noise filter. U.S. Patent 6,762,656 to Kobayashi et al discloses a LC noise filter. U.S. Patent 6,646,523 to Arai et al describes a distributed content type noise filter. U.S. Patents 5,030,933, 4,866,407, and 4,847,575 to Ikeda provide noise filters having multiple layers. U.S. Patent 3,753,159 to Burwen shows a variable bandpass dynamic noise filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
